## **RARE TUMORS OF THE VULVA: A MULTICENTRIC AMBISPECTIVE STUDY**

- Observational, national and multicentric study aiming to collect retrospective and prospective data concerning patients suffering from rare vulvar cancers and treated within MITO centers between 1990 and 2025**
- The retrospective section of the study analysis will encompass data about patients treated within MITO Centers from 1990 to 2022**
- The prospective part of the study involves the enrolment phase and the collection of data from prospective patients treated from 2023 until 2025**
- The study is observational and it is not designed to modify prospectively patient's clinical course. The way patients will be managed or the decision in treatments prescription will follow current clinical practice and guidelines and they are entirely independent from the decision to include the patient in the study**
